JOB OPENING: **Electrical PE**

JOB DESCRIPTION:

Are you a highly motivated Electrical Engineer skilled in building electrical and lighting design looking for an exciting opportunity to work on multiple projects with an amazing team?

We are Rensch Engineering, an electrical and mechanical engineering firm located in beautiful and historic downtown Snohomish, WA. This location provides a great place to work with minimal commute times and a lower cost of living compared to the nearby big cities. Our office includes people who enjoy recreational activities like skiing, hiking, snow shoeing, camping, and fishing all within an hour of the city. Many of our team members are also parents who enjoy being closer to their families and their everyday needs. This Electrical Engineering position will expose you to many types of projects and challenges while working alongside other engineers. If you're looking for an opportunity to join our team, expand your knowledge, and work on exciting projects while enjoying an easier pace of life in your off time, then we'd like to hear from you!

Successful Candidates in this role possess the following traits:

- They are exceptional communicators with the ability to work with customers, colleagues and pretty much anyone in a friendly, professional manner that represents the firm well.
- They enjoy a variety of jobs and challenges and have the ability to work on multiple projects at one time, while tracking priorities.
- Willingness and ability to collaborate with other in-house Mechanical and Plumbing engineers as well as utility companies for power and communication building services.
- Motivated and able to work from home and in the office using Zoom, Teams and other communication platforms.

Requirements of the Position:

- Bachelor's degree in Electrical Engineering with a Washington State Professional Engineering license.
- A minimum of 4 years of recent commercial building electrical design experience.
- Proficient in AutoCAD, Office 365, Windows, and applicable electrical engineering software.
- Experience designing Low voltage (600V or less) power distribution systems including emergency generators and UPS systems.
- Experience designing lighting systems which include controls and compliance with state energy codes.
- Proven ability to understand and perform fault current and arc flash calculations.
- Ability to read and interpret architectural plans.
- Previous experience on site, with the ability to survey electrical systems within existing buildings.
- Excellent organizational and communications skills.

We offer top pay and benefits for qualified candidates. Salary range being offered is $90K to $110K, contingent on qualifications.
