JOB OPENING: **MECHANICAL ENGINEER**

JOB DESCRIPTION:
Are you a highly motivated Mechanical Engineer skilled in building mechanical and plumbing design looking for an exciting opportunity to work on multiple projects with an amazing team?

We are Rensch Engineering, an electrical and mechanical engineering firm located in beautiful and historic downtown Snohomish, WA. We design plumbing and HVAC in multifamily, mixed use, commercial, and industrial buildings. This location provides a great place to work with minimal commute times and a lower cost of living compared to the nearby big cities. As well as a good selection of local cuisine within walking distance of the office. Our office includes people who enjoy recreational activities like skiing, hiking, running, biking, camping, and fishing all within an hour of the city. Many of our team members are also parents who enjoy being closer to their families and their everyday needs. This Mechanical Engineering position will expose you to many types of projects and challenges while working alongside other engineers. If you're looking for an opportunity to join our team, expand your knowledge, and work on exciting projects while enjoying an easier pace of life in your off time, then we'd like to hear from you!

Successful Candidates in this role possess the following traits:

- They are exceptional communicators with the ability to work with customers, colleagues and pretty much anyone in a friendly, professional manner that represents the firm well.
- Is conscientious and willing to become a student of the way Rensch puts extra care into doing design work.
- They enjoy a variety of jobs and challenges and have the ability to work on multiple projects at
- one time, while tracking priorities.
- Willingness and ability to collaborate with other in-house Mechanical engineers as well as other outside engineers including structural and civil.
- Motivated and able to work from home and in the office using Zoom, Teams and other communication platforms.

Requirements of the Position:

- Bachelor's degree in Mechanical Engineering (Professional Engineer's license is a plus).
- A minimum of 4 years of recent HVAC and Plumbing systems design experience preferred with options for entry level position.
- Proficient in AutoCAD MEP, Revit, Office 365, Windows, Trace 700, Sketchup and other applicable mechanical engineering software.
- Understands HVAC systems including VAV, VRF, Water Source Heat Pumps, Chiller/Hot water systems, split and packaged systems. Ammonia refrigeration design experience would be desirable.

- Understands how to design plumbing systems including hot water sizing, pipe sizing and distribution, multi-story pipe system design and the implementation of different piping materials.

- Proven ability to understand and perform heat load calculations, plumbing pressure and pipe sizing calculations, duct sizing and static pressure calculations. Washington State energy code knowledge with the ability to select code compliant systems.
